1.0 Scope and Application

1.1 This method is used for the determination of amylose in rice extracts.

1.2 The Method Detection Limit (MDL) of this method is 0.080 mg/L. The applicable range of the method is 1.0–500.0 mg/L amylose in rice extracts. The range may be extended to analyze higher concentrations by sample dilution.

2.0 Summary of Method

2.1 Amylose is a chain of long unbranched D-glucose units that react with iodine at a pH of 4.5–4.7 to produce a blue color measured at 600 nm.

2.2 The quality of the analysis is assured through reproducible calibration and testing of the Segmented Flow Analysis (SFA) system.

2.3 A general flow diagram of the SFA system is shown below (see Section 17.0 for a detailed flow diagram).

3.0 Definitions

Definitions for terms used in this method are provided in Section 16.0, “Glossary of Definitions and Purposes.”
4.0 Interferences

4.1 No chemical interferences are known.

5.0 Safety

5.1 The toxicity or carcinogenicity of each compound or reagent used in this method has not been fully established. Each chemical should be treated as a potential health hazard. Exposure to these chemicals should be reduced to the lowest possible level.

5.2 For reference purposes, a file of Material Safety Data Sheets (MSDS) for each chemical used in this method should be available to all personnel involved in this chemical analysis. The preparation of a formal safety plan is also advisable.

5.3 The following chemicals used in this method may be highly toxic or hazardous and should be handled with extreme caution at all times. Consult the appropriate MSDS before handling.

5.3.1 Acetic Acid, glacial (C\textsubscript{3}COOH)

5.3.2 Citric Acid (H\textsubscript{3}C\textsubscript{6}H\textsubscript{5}O\textsubscript{7})

5.3.3 Potassium Iodide (KI)

5.3.4 Iodine (I\textsubscript{2})

5.3.5 Sodium Hydroxide (NaOH)

5.4 Unknown samples may be potentially hazardous and should be handled with extreme caution at all times.

5.5 Proper personal protective equipment (PPE) should be used when handling or working in the presence of chemicals.

5.6 This method does not address all safety issues associated with its use. The laboratory is responsible for maintaining a safe work environment and a current awareness file of OSHA regulations regarding the safe handling of the chemicals specified in this method.

6.0 Apparatus, Equipment, and Supplies

6.1 Segmented Flow Analysis (SFA) System (OI Analytical Flow Solution IV) consisting of the following:

6.1.1 Model 502 Multichannel Peristaltic Pump

6.1.2 Random Access (RA) Autosampler

6.1.3 Expanded Range (ER) Photometric Detector with 5-mm path length flowcell and 600-nm optical filter
6.1.4 Data Acquisition System (PC or Notebook PC) with WinFLOW™ software

6.1.5 Amylose in Rice Cartridge (Part #A002852)

6.2 Sampling equipment — Sample bottle, amber glass, with polytetrafluoroethylene (PTFE)-lined cap. Clean by washing with detergent and water, rinsing with two aliquots of reagent water, and drying by baking at 110°–150°C for a minimum of one hour.

6.3 Standard laboratory equipment including volumetric flasks, pipettes, syringes, etc. should all be cleaned, rinsed, and dried per bottle cleaning procedure in Section 6.2.

7.0 Reagents and Calibrants

7.1 Raw Materials

7.1.1 Amylose

7.1.2 Acetic Acid, glacial (C₃COOH)

7.1.3 Citric Acid (H₃C₆H₅O₇)

7.1.4 Deionized Water (ASTM Type I or II)

7.1.5 Ethanol, 95% (CH₃CH₂OH)

7.1.6 Potassium Iodide (KI)

7.1.7 Iodine (I₂)

7.1.8 Sodium Hydroxide (NaOH)

7.1.9 Triton X–405®
